

WHAT IS CLAIMED IS:

1. (Once Amended) A wire shelf comprising:

a pair of side members; and

a plurality of shelf wires being disposed spaced apart from each other and being joined to said side members, each of said side members being comprised of a side member truss having an upper wire and a lower wire spaced apart from each other, said shelf wires having a topside and an underside, said upper wire of said center support member truss being joined to said underside of said shelf wires, said upper wire of each of said side member trusses being joined to said topside of said shelf wires, said side member trusses each including a respective corrugated wire, one of said respective corrugated wires being disposed between said upper and said lower wires of one of said side member trusses and joined to said lower wire of the one of said side member trusses at a plurality of locations and directly to at least some of the undersides of the shelf wires, a further one of said respective corrugated wires being disposed between said upper and lower wires of a further one of said side member trusses and joined to said lower wire of the further one of said side member trusses at a plurality of locations and directly to at least some of the undersides of the shelf wires.

2. A wire shelf as in claim 1, further comprising a center truss that extends parallel to said side member trusses and is attached to said shelf wires.

3. A wire shelf as in claim 1, further comprising at least four post supporting members each disposed at a respective corner of said wire shelf; a pair of end members comprised of a truss having an upper wire and a lower wire, each of said end members being joined at one end to one of said post supporting members and being joined at another end to another of said post supporting members, each of said side

members being joined at one end to one of said post supporting members that is joined to one of said end members and being joined at another end to another of said post supporting members that is joined to another of said end members.

4. A wire shelf as in claim 3, further comprising a center truss that extends parallel to said side member trusses and is attached to said shelf wires.

5. A wire shelf as in claim 3, further comprising a center truss that extends parallel to said side member trusses and is attached to said end members.
